

### I 30 con il sottostante piu' volatile

La volatilita' del sottostante e' un indicatore del rischio del certificato. Quanto piu' essa e' alta, tanto piu' aumenta la probabilita' che venga rotta la barriera e venga meno la protezione. Elevati livelli di volatilita' devono essere remunerati con maggiori rendimenti del certificato.

30 High Underlying Volatility	ISIN	STRIKE	P. sott.	Prezzo Certificato	Frequenza Cedola	Cedola	Barriera	Cap Garantito?	Distanza Barriera	Rendimento a scadenza	Rendimento Annuo	Giorni a scadenza
